Summary

Software Developer with 2+ years of experience building robust, scalable web and mobile applications. Specializes in e-commerce platforms using technologies like Next.js, React Native, and Golang. Passionate about learning new technologies, optimizing performance, and delivering clean, maintainable code.

Work Experience

Full Stack Software Developer
Bigbee | May 2023 - Present

- Built and delivered features based on assigned tickets, prioritizing critical bug fixes to maintain application stability and enhance user experience
- Developed a shopper-facing web application to allow users to place orders without downloading a mobile app, improving accessibility and customer reach.
- Refactored legacy pages in the web app to reduce unnecessary re-rendering, resulting in smoother performance and better maintainability.
- Worked closely with designers, testers, and full-stack developers in a small agile team to ensure high-quality releases and improve team collaboration.
- Contributed to developer experience by maintaining internal UI guides with sample code, which accelerated onboarding and boosted team productivity.
- Developed scalable and maintainable features and services using Golang, React Native, Next.js, Docker, Redis, and River Queue, enhancing system performance and reliability.

Junior Front-End Developer (React.js)
Freelance | Feb 2022 – Jun 2022 (Remote)

- Developed a job-seeking website for a recruiting company using React.js, enhancing user engagement and application efficiency.
- Implemented API integration using Axios and managed state with Redux, improving data flow and application performance.
- Collaborated with a remote team to deliver user-friendly, intuitive user interfaces.
